Acknowledgments

No one achieves something great without the help of those around them, whether directly or indirectly. To complete this capstone project, we were fortunate to receive tremendous support and assistance from our supervisors, lecturers, friends, and family. We would like to dedicate these opening pages to express our sincere gratitude to everyone who has accompanied us throughout this journey.

First and foremost, we would like to express our deepest appreciation to all the lecturers at FPT University Hanoi Campus, particularly those in the Information Technology Department. The valuable knowledge they have imparted, along with their dedicated support throughout the implementation process, has enabled us to complete this capstone project and achieve noteworthy results.

We would like to extend our special gratitude to our supervisor, MSc. Trịnh Tiến Đạt, and our co-supervisor, Dr. Nguyễn Anh Nhật, who have inspired us, provided dedicated guidance, and offered invaluable support in terms of knowledge. They have created a favorable environment for us to learn and exchange ideas with fellow students in the research group. These are precious knowledge and experiences that will benefit us not only in this capstone project but also in our future careers.

Finally, we wish to express our heartfelt thanks to our families and loved ones, who have always been our solid support and have encouraged every decision we have made.

Despite our best efforts to make this thesis as complete as possible, shortcomings and limitations are inevitable. We sincerely hope to receive your understanding and constructive feedback from our supervisors and readers.

Abstract

A good abstract is a stand-alone summary of the paper, and should summarize the key components of the manuscript. Generally, the abstract should be concise and informative within 200-300 words. As an abstract is a separate section, it should be a self-containing text (no abbreviations, no references, no URLs, no undefined concepts, etc.). For research articles, abstracts should give a pertinent overview of the work. We strongly encourage authors to use the following style of structured abstracts, but without headings: (1) Background: Place the question addressed in a broad context (research background) and highlight the purpose of the study; (2) Methods: Describe briefly the main methods or treatments applied; (3) Results: Summarize the article's main findings; and (4) Conclusions: Indicate the main conclusions or interpretations.

Keywords: cybersecurity, information security, threat analysis, resilience

List of Abbreviations

Acronym	**Definition**
DSP	Digital Service Providers
EU	European Union
GSP	Global Stability Protection
OES	Operators of Essential Services

Chapter 1

Introduction

Provides background information, introduces the research problem, and outlines the purpose and significance of the study. *Below are suggested section names, project groups and instructors can change to suit their project.*

1.1 Background

Illustration for list of tables:

Illustration for list of figures:

The image illustrates a five-level cybersecurity protection pyramid, showing how different layers of security build upon each other.

At the base, the pyramid starts with Basic Security Protection, which emphasizes cyber hygiene and ensuring the safety of everyday internet users.

Type of Threat	**Description**	**Impact**
Hacking	Unauthorized access to systems or networks	Data theft, loss of confidentiality
Phishing	Fraudulent attempts to obtain sensitive information	Identity theft, financial loss
Malware	Malicious software designed to damage or disrupt systems	Data loss, system downtime
Insider Attacks	Security breaches from within the organization	Compromised data, reputational damage

Table 1.1: Types of Cyber Threats and Their Impact on Organizations.

Figure 1.1: The Layers of Information Security.

Above this is Critical Asset Protection, focusing on compliance with the NIS directive for Digital Service Providers (DSP) and Operators of Essential Services (OES).

The third layer, Digital Single Market Protection, covers threats such as cyber attacks, cyber crime, cyber espionage, and cyber sabotage.

The next tier, Global Stability Protection (GSP), broadens the scope to cyber norms, cyber diplomacy, cyber defence, and cyber warfare, highlighting their importance for international cybersecurity cooperation. At the top of the pyramid, Democracy and Human Rights Protection addresses areas such as cyber ethics, cyber democracy, and cyber human rights, reinforcing the European Union (EU)'s core values in a digital society.

This layered structure demonstrates how essential security fundamentals support higher-level societal protections in the digital ecosystem [1, 2].

1.2 Problem Statement

1.3 Research Objectives

1.4 Significance of the Study

1.5 Scope and Limitations

1.6 Thesis Structure

Chapter 2

Literature Review

Reviews relevant existing research and demonstrates how your thesis fits into the broader academic conversation.

2.1 Review of Previous Studies

2.2 Summary of the Literature Review

2.3 Contribution of Research

Chapter 3

Methodology

Describes the research design, data collection methods, and analysis techniques.

3.1 Research Design

3.2 Data Collection Methods

3.3 Sampling Data Analysis Techniques

3.4 Limitations of the Methodology

Chapter 4

Experimental and Results

Provide a concise and precise description of the experimental results, their interpretation as well as the experimental conclusions that can be drawn. You should discuss the results and how they can be interpreted in perspective of previous studies and of the working hypotheses.

4.1 Introduction

4.2 Presentation of Data

4.3 Analysis of Results

4.4 Interpretation of Results

4.5 Comparison with Literature

4.6 Implications of the Results

Chapter 5

Discussion

The findings and their implications should be discussed in the broadest context possible and limitations of the work highlighted.

5.1 Restate the Research Problem or Objectives

5.2 Summarize Key Findings

Chapter 6

Conclusion and Future Work

The 'conclusions' are a key component of the paper. It should complement the 'abstract' and is normally used by experts to value the paper's engineering content. A conclusion is not merely a summary of the main topics covered or a re-statement of your research problem, but a synthesis of key points and, if applicable, where you recommend new areas for future research.

6.1 Conclusion

6.2 Future Work
